ABOUT US

Led by a doctor with 30 years of knowledge and experience in the sector, Sante Group brings together a management and operations team with expertise in healthcare, hospital services and engineering. Our dynamic team has received training and gained practical experience abroad. Sante Group's foundations date back to the 1990s, and the group has been privately owned since the early 2000s. As hospital management grew in importance in Turkey, the group established itself among the sector's pioneers. Our work covers hospital project design, implementation and

management. We combine years of experience with modern technology to deliver projects effectively and put technological advances into practice. We make life easier for healthcare professionals and patients. Our contribution extends beyond buildings, spaces, systems and equipment. Drawing on our technical and theoretical knowledge, we provide consultancy and ideas that support our clients' businesses. Alongside commercial success, we value the satisfaction our work brings to our clients.

HOSPITAL PROJECT AND CONSULTANCY

Hospital consultancy and project design are carried out by specialists with many years of experience across all areas of a hospital. They consider each detail on your behalf and incorporate it into the project. From wall paint, ceilings and flooring to heating, cooling and ventilation, every aspect is planned in detail. This includes the number and layout of operating rooms, the sterilization centre, inpatient rooms, intensive care services, hospital entrances and reception halls. We

present our proposals for hospital consultancy and project design to the relevant decision-makers. We discuss the plans, exchange ideas and make any necessary revisions. Once the projects are approved, we begin implementation. We design and deliver your hospital, then hand it over when it is ready for service. Our consultancy, design and implementation services guide the project step by step from planning to completion.

OUR QUALITY POLICY

Sante Group assesses project risks at every stage, beginning with the investment decision. We work within a project framework defined by the client to anticipate and manage risks. From contract preparation through testing and commissioning, we provide project

management services through our expert team and our domestic and international solution partners. Sante Group works to turn major investments into major successes.
